World Community

For solving the problems faced by the mankind it is very important to use natural resources rationally in terms of technical progress. Mentioned issues foresee solution in the Scientific Book – Implementation of innovations for making the production perfect and increasing efficiency – author L. Chachibaia. Problemacy foresees the meeting of requirements of population in terms of providing food products, treating complex diseases and cancer and implementation of the mentioned in medicine together with new technique means and technologies. Using food and medical means without thermal processing conditions the human health directly. Processing agricultural production for receiving ecologically pure product is also important to solve public administration concepts of economic development in separate regions, implementation of new technologies conditions the decrease of energy resources, processing of food and medical means in terms of string them and using which in its turn is related to the fact of making globalization issues perfect.

Mentioned issues are worked out using 25 innovations, 2 discoveries, more than 50 scientific works and 2 monographs, which were given relevant recommendations by government, four committees of Parliament, relevant Ministries, Scientific Research Institutes, Universities, Academy of Sciences, relevant foreign authorities. It is pity that according to competition regulation when work is not given evaluation in the form of expertise report. No moral or legal attitude was revealed in Fund because it is impossible to establish any restrictions in intellectual creativity like I have stated that innovations for implementation are transferred in sequence, also export of production is banned. According to the Constitution of Sweden the delivery of information is not banned, but demand remains as demand that according to the figures of 10 recent years the expertise should have been made to medicine, biology, agriculture, industry, economics, regional management issues (concept). Among the requirements for organizing competition the evaluation of work is one of the principles, which still is considered as not fulfilled, when the issue is related to the solution of problems set before mankind during the century, new ways for solving in complex. If the expert working for Fund had tested the sample and treat patient with his innovated medicine and so on then they would not have been reminded about issuing the expertise. Our specialists as well as foreign ones denote that the mentioned problems are rather actual and they have no alternative.

Nobel Institute in its letter 38679/49 dated 26.11.2012 denotes that they have no remarks regarding the work and are grateful, but what are they expected to be requested? I ask World Community to protect my rights on behalf of you and I consider it reasonable to broadcast the mentioned issue through online regime to make the mentioned issue transparent for everyone. The Board of technique, technology, economics and law expertise has examined the issues additionally in its letter #1/3 dated 09.03.2016 and gave recommendation about receiving the prize from Alfred Nobel Fund.

Please, in consideration of the mentioned issues examine the enclosure to Express Bulletin 56 and please notify us about the decision in reasonable period of time.

Regards, Academician L. Chachibaia

Please examine Express Bulletin #56, which is related to the non issuance of expertise report on the Scientific Work - Implementation of Innovations, making production perfect and increase efficiency”

Please notify us about decision taken.

Regards, Academician

L. Chachibaia

Express Bulletin №56
Scientific Industrial

We publish the extract from the meeting of Technique, Technology, Economics, Law Expertise Board regarding the non issuance of expertise report for the scientific work – book “Implementation of innovations for making the production perfect and increasing efficiency,” in Alfred Nobel Fund. Information provided was related to the issue of non issuance of expertise report for the implementation of innovations worked out by Academician L. Chachibaia, Director of Scientific Center for implementing problems of technique, technology, economics and management. Problematic foresees receiving of ecologically pure product under terms of technical progress for food and medical treatment through minimal material and labor expenditures – for maintaining peace. The existence of human being that is life is directly related to the factors of food and health. This “base” in all formations remains unchanged and they condition one another. The mentioned rises increasing requirement when adjusting to the natural resources, increasing of level of production, using the industrial means rationally, right relevance of fields, specialization and increase of concentration level, exploitation of labor staff rationally and other which should be carried out through implementing new technique, technology and intellectual creative work and so on. According to physiology norm for satisfying 7.3 milliard world populations with food products annually it is necessary to take 7×10^{15} kg calories food and for this purpose it is necessary to produce meat of 569×10^9 kg calories, milk – 1×10^{15} kg calories, egg 2×10^{12} items, potatoes 708×10^9 kg calories, fish 131×10^9 kg calories, plant oil 51×10^9 kg, calories, sugar – 131×10^9 kg calories. For this purpose it is necessary to increase the level of industry by 35% which is rather complicated process.

Means for solving the problem:

Nature gives rich raw material, it is rather important that during the process of processing the yolks, fats, carbohydrates, vitamins, micro elements and other substances are to be minimized which exceed in 40%. This factor (losses) has negative impact on satisfaction of

human requirements – energetic balance. For this purpose it is necessary to implement following in industry:

1. Food and medical extracts received from the root, stem, leaf and fruit of the plant without thermal processing which are kept in room conditions for 14 months are used since 1993. For treating thyroid, psoriasis, eczema, dermatitis, cancer, tuberculosis, digestive system, hepatitis, lack of appetite, dryness of mouth, swelling of gums, anemia, mammary glands, knots, adenoma, atherosclerosis, feeling cold in joints, changing substances, diabetes, fungus diseases – improving ear, nails, eyesight, for restoring skin abrasion and bone tissues, for minimizing high temperature, for treatment worms, itching, abrasion of hands and legs, increasing strength, for treatment of inflammatory processes of genitals, duration of treatment with mentioned extracts is not more than 2-3 months, when treatment with classic methods needs more time.

The average is enough to treat disease 150-200 dollars, which is almost 2-3 times less than the existing drugs, even accidentally wrong gamoqebisas has no contraindications, which is considered to be the most important factor (utilization requires the treatment of herpes and Ebola issues). The aforementioned diseases indicate the use of complex extracts with high efficiency, because the diseases are linked. It should be noted that the plant extract in the composition of 60-65% to match the composition of the human body, which is a very important factor. To accomplish this will need to change the approach to the transition to new methods of medical treatment.

Veterinary medicinal extracts for use in food is very important momnebeli system, skin, inflammation, infectious diseases, poisonings and more. As for the breeding of food extracts in winter conditions the green mass, grain and leguminous plants in order to maintain at least a 0.2 increase in food per unit of livestock production by 35%. Extract the micro elements in increasing the effectiveness of infectious diseases (stored for 2 years or more at a time) treatment. If conditionally Georgia with 196 dollars per capita spent on treatment, then the world's population of 7.3 billion would be needed to treat 1.4×10^{12} dollars. The extract 12% of the economy in terms of the overall economic effect of 17.1 billion dollars. Production of means of medication, material and labor costs into account, etc. (Without the use of the livestock sector). Almost all of the economic justification for the 1.5 - 2 times less represented.

2. Food and medicinal use of extracts, non-alcoholic and alcoholic beverages is very important, which is used since 1993 and kept at room conditions for 14 months, winter conditions including vegetables, fruit, grapes, wild plants of the fruit store.

Alcoholic beverages is important to get the spirit of the new technology, which is used in all kinds of raw energy resources Construction gadaadgilebadia, minimized losses of alcohol

during processing, which will contribute to the development of the economic effect of 1 liter of alcohol making farming conditions by 35% is determined. Takes a positive assessment of the food extracts for use in the production of beer, as well as a variety of dry drinks to get that in the future there is no alternative. 300 million tons of the 59 indicators in terms of annual production in the processing area of the plant extract energy resources, transport, labor wage and other cost savings of 186 million dollars per year. The new technology of making alcohol.

3. Very often, the injury as a result of the treatment over the years can not be removed from the patient's body from the metal, which has a negative impact on his health. Even 1% of the world's use of the economic effects of the two operations are in 227 million dollars over a year. This issue concerns the injury in terms of the use of intensive treatment, the mantle, which is made entirely of metal without certain organs of the body and the fixation treatment.

4. New technology matsvnisa and cheese reception, which is becoming one of dedoti Matsoni and cheese reception, which is kept in a room under 11 months, the milk does not need to stir and refrigeration Matsoni 8-10 days. Accepted aromatic products, which positively affects the digestive and nervous system, and more. Cheese removal resulting tsatkhi 2 months stored at room conditions, which may be used in exchange for bread baking yeasts (Matsoni use since ancient times were in Georgia). Medical equipment, industrial space, energy resources, savings as a result of the effect of 76 million dollars over energy, medical equipment, labor cost savings of (the 59 indicators annually) which will contribute to the development of farming regions.

5. Rolling of tea without the new technology provides a natural drying of Rolling, fermentation, artificial drying to remove, and as a result we get a black-Orange colored aromatic drink, which is not unique to a single species of tea. Extractive substance by 48% is determined by the body up by 9%. It is very important to use medicinal extracts of psoriasis, eczema, cardiovascular and nervous system, and other treatment. Food products of which 86 million dollars over the economic efficiency of the treatment without taking into account each year. It is very important termiuli processing without making tea and medicinal preparation of tincture, which is kept at room temperature for 11 months.

6. New technology of bread baking - where the flue gas is not the baking zone, a fuel used in all types of energy resources, mainly building tikhisganaa. We get the hot water. Five-story complex machinery used in bread making is becoming increasingly important in the production of tinned meat and cheese smoking beef-davichinebis mind. Construction gadaadgilebadia. The economic effect of 244 million annually (59 state indicators).

Production area of energy resources, and other service personnel in mind. It should also be noted that the introduction of new technology is critical for the healing of bread, cereals and leguminous plants 6 species is derived, is characterized by high aromatulobit and maintaining long-run (2-3 days).

7. Livestock and wild animals to be transported to a specialized storey mobile, semi-trailer van and wagon-container for all kinds of vehicles, the samples tested are recommended for introduction in the TRACECA project, which takes place three to four floors to transport livestock. The total number of family members for about 26% of the livestock in the railway transport, while 44% of the transport vehicle. It is very important winter and summer pastures, as well as maintenance for the livestock transport vehicles khortskombinateb the tsonamatis. Semi-trailer van wheels between 98 cm and the 3rd floor by placing a semi-trailer moving van's floor by raising the efficiency increases by 60%. Options: 11x4,5x2,5 meters, each floor includes smoothing, nutrition, metabolism. Also wagon-container. The economic efficiency of all types of vehicles in the 2, fuel, electricity, supplies parts to loading and unloading operations and other amounts to 46.8 million dollars over the tsonamatis maintenance each year (the 59 indicators).

8. The planning of the new library from the repository of the book readers deliver complex machinery - automation, infrastructure in mind, is very important in order to improve the management of a positive impact on the quality of the intellectual creation. The minimum estimate of 45 personnel release economic benefits of the year to 7.2 million dollars per unit, as well as other material costs compared with the existing structure. Resulting in improved management, sanitary and hygienic norms and other repository.

It is very important in order to satisfy the industrial cities with populations of less labor intensive poultry sector in the planning of infrastructure, which is run in any of the region to meet the needs. The complex infrastructure planning scheme recommended by the book of the work, innovation and improving production efficiency. See. P. 160-162. By I. Chachibaia. The impact of globalization, the problems mentioned above, and the other technologies indicators: 1. the saving of resources. 2. The adoption of environmentally friendly products. 3. Nature of-ecology. It is very important for today's requirements. Naturally the production of perfection of the difficulties in the region, it requires a separate study of the natural environment of new technologies. The solution must be sought to raise production levels. In order to facilitate the review of the effectiveness of the economic indicators and other issues have not been discussed makers because of its sarealiatsio prices vary greatly. They distributed the overall indices. It should also be noted that the new equipment, technology, management issues affecting the introduction of certain quantitative and qualitative indicators of production, which among other things he is not

considered for the analysis of economic efficiency. The latest news from the world of production through the introduction of performance indicators increase by 30%.

State Management improvement issues

Any formation of the necessary consolidation of the society, and not confrontation, when the community chooses it will need to remain in control of the state authorities to function in some form, to avoid endless disputes, which has a negative impact on the processes in the society. Mostly controversy indicates the weakness of management systems. The need to consolidate the society, which will include political parties, war and labor veterans, young people, non-governmental agencies, and other religions. Their representation in elected bodies should be defined as 50%. The executive, the legislature and the public in the form of a single idea can contribute to improvement of management. This situation led to the autonomy of management divisions in the country. The public should be given to controlling the functions. Because the state will not be without, the public is not the economy, management, religion, territory, etc. without To form a unified management system in the regions - the autonomy it needs to be studied in the individual elements of the region's priorities. Consolidation will be the starting point for a person to take a worthy place in the elected bodies of its values. The common "background" will help us to choose a pre-determined according to footage of his creativity, and not the way that we are reaping the results of a long time in almost all sectors of the economy. The management of the Basic Law, should be based on self-awareness. The rule of law, employ workers, highly skilled people and other countries in the crisis. The solution must be sought to increase the production level, where the middle class is paramount to employ new techniques and technologies.

Consolidation is one form of detection is considered to hold the elections in accordance with the law. The electoral system should be based on personality, values to identify the most suitable place to take a fine. No one should be allowed to have any impact on the electoral system, which has a negative impact on the country's reconstruction. Voter interest must be eliminated in order to gain privileges. The current electoral system does not meet the requirements of management, resulting in a confrontation between political parties and the public, etc. It adversely affects the country's reconstruction. The motive of the fact that, parliamentarians and civil servant does not meet today's requirements, we are headed. The system, which is focused on go-to come if you have changed the country can not develop, and hangovers. Still the question of what is the problem, which can not be terminated except for personal interest, which leads the country dissents. It once and for all must end. Consolidation of power, the state government should be from the periphery to the center, and not vice versa. Ie The state does not need to be managed from the outside,

and a number of other issues require perfection of democracy and technological advance the more difficult it is to govern the state. For this purpose it is necessary to establish graduate of the preparation of the State Management Academy of Sciences. The solution must be sought in the intellectual creations. Management systems for autonomous divisions negative impact on the country's reconstruction. The academy will train the country's main priorities of a government official. They must be carried out by the regional administrative (one or two candidates) until you create a society that consolidates the body. According to the submission of the district's population, which is acceptable for the exam will be "student", which will be elected after the same region or other unforeseen circumstances etc. The Academy should ensure coordination of organizational issues of the electoral system, which will be accountable to the community that consolidates the body. Such issues will facilitate constantly gamotanabrebulad prepare shots, which focused on the country reconstruction. Without the interference will be reduced to the minimum. Today, the problem is more acute in humanity. According to the electoral system in the world perfection, because it fails to meet its obligations for the state to withdraw from the crisis. Any formation conditions, to create normal living conditions. Instead of taking the improvement of management systems, raw confrontations between the parties, but we spent time, energy, funds over the years, which adversely affects the country reconstruction. Parties, institutions, communities layers to allow for the distribution cent to the side of, this will need to be given the benefit of their creative activity, the State Administration came to power with the support of the country's creative environment, and management of the fine to take a worthy place and not conditional Interested persons.

- All regions according to the Parliament for the formation of five million people, will be sufficient 200-250 MP (ie state employees), which are the product of the parliamentary and governmental "Fund", - in the case of a candidate of the votes more than 50 percent will give the majority principle is chosen to be a member.
- In the case of the MP candidates in 50 per cent of the votes in the elections, including the principle of majority voting should be urtiertarcheva or lottery;
- Candidate for the position of Speaker of the Parliament shall be elected in the case, when he will receive 50 per cent more votes than voters;
- The election of candidates who are unable to obtain the 50 percent of the parliamentary speaker's position, to be adopted by Parliament by a majority principle;
- In cases where more than 50 percent of voters would vote for a candidate for president in the election, the candidates shall be elected as President of the principle of majority;
- The election of candidates who are unable to obtain the 50 percent of the President position, to be made by the Parliament vote, the vote of the majority principle. Emergent president, tanjdomaris Parliament, the Prime Minister in order to increase the quality of the "elite" in the 250-member parliament, or government background, should be 50 percent

the selection, ie, 125 men are still going 63-of-choice, which in turn will elect the three candidates - the president, the parliament speaker and the prime - minister. Their disagreement in the drawing according to the position.

Most significantly responsible for the introduction of a new form of the ballot, which will be the MP, Speaker of the Parliament and presidential candidate dasakheleleba. Both sides will have a ballot paper (the same number) the first name, last name, place of residence and official figures. Voters choosing to retain part of the candidate's ballot left. In case of dispute the numbers prove it, if they had voted.

"Differential approach" requires the election of the Prime Minister. Spetsipikurobisa and its complexity, it depends on the management issue. Ministers and their deputies should be the first choice of the Prime Minister. Administration of the President is given the choice of 15 votes, the parliament speaker, the chairs of committees by relevance. Parliament and the President's administration in exceptional cases have the right to nominate a candidate for prime minister.

There shall be no political parties, public organizations, personalities imposed limit participation in elections. Elections to select the selection itself. It is unacceptable limits. Conditions to win elections in an objective truth. Everything should be directed towards that as much as possible to achieve the unification of thought, the system can choose the district governor, mayor, minister, etc.

Election period of 5-6 years to be defined, because a lot of time is spent in the governance structure. Organizauli issues in order to improve the presidential, parliamentary government elections will be conducted in one day. Declared a day. The MP, who does not fulfill his promise of 9 months shall be called by a majority of voters in accordance with the submission of its report. The existing electoral system by removing many barriers to change, reduce tensions and aimless, most importantly, the community has created the belief that people are the rule of law will bring social and material good, increase confidence, which invariably should be based on the law.

Action can not be regarded as an initial starting point for controversy shimshiobis its form-content, which is connected with the spiritual and social-material things. In this case, preference should be given to the referendum on the withdrawal of 51% in support of its implementation should be imposed on the structure of the executive (administration) 3 days after the failure of the action for non-compliance, taking into account the conduct of the party responsible for the damage to the other side. To avoid unintended consequences. Every four years, the conditions for the presidential, parliamentary and municipal elections, 4 million votes, or 45.2 million of the 108 million dollars spent on the world's population of 7.3 billion to 5.2 billion of the voters of the 56.1 billion dollars will be spent. The amount does not include expenses, which were collateral damage as a result of confrontations. It should also be taken into account to improve the quality of life and as a result of the

economic indicators, which in total savings of 1.3 billion higher than the minimum calculation. Today in the election and the war in which money is spent in the amount of 5% of that spent on intellectual creativity at least a 50% reduction in disease, starvation. Society would not be divided into layers, etc.

These issues have been worked 2 monograpii- (industrial livestock development, innovation and improvement of production efficiency), 25 of the invention, detection of 2, which is considered the scientific research institutes, universities, the Academy of Sciences, the Central Election Commission, political parties, the executive and legislative bodies, foreign Specialists of the scientific conferences and other considerations into account.

As for the expert opinion on the issue of non issuance I addressed several of Sweden, and of the European Parliament, the Alfred Nobel Foundation's administration, which was published in the newspaper "New Generation" on 29/07/2015. Fund administration staff, the experts that they can test piece and also to test its drug to cure the sick, etc. Then they would not have to give a reminder of the examination report. As our foreign experts point out that the problems of the actual workings of it is no alternative to the Nobel Institute in 26/11/2012 №38679 / 46 letter notes that the work of the note, and I do not have to work more on what to expect from a barbecue making you sing in Swedish? I ask the world community to protect my rights on your behalf; I consider it appropriate that the issue of the participation of the parties to be broadcast in the open air for all the talk that is transparent for everyone. No restrictions shall be intellectual creations of international declarations of the Swedish Constitution does not prohibit the information. Fund before the issue examined in 1.medsina, 2.biologia in agriculture, industry, 3. economics, regional management - the concept of the 10-year-old brand. What we are talking about reviewing the results of the research are realized over the years. I ask for your name to the world community to protect my rights, I consider it appropriate that the issue of the participation of the parties to be broadcast in the open air, for all the talk is transparent for all. The issue for humanity in new directions in the field of coordination century for problem complex solution.

The work and expertise submitted for prize awarding, according to the examination report to be handed if there is no alternative. There was no agreement between the parties in advance any conclusion on non issuance (regulations), as I stated above, the News release did not implement the production of the series, and as a result the State (Regions) millions of suffers.

Naturally, the fund will have to read the old verse.

Formulae for invention
Against humanity

If gifted with heart
Good award named

At the end of injustice
A long time?
Nobel Foundation in Sweden
The people judge.

If gold is silver
Core nut is gifted
Better than pure gold

Let's say toast with Capra horn

Let bring alive all the grace of the peak standing
The approach is still standing Capra horn toast.
The shadow of the sun and moon are standing side by side
Generosity and wisdom of the language you revitalize our nation.
Everyone one we wish to enjoy ourselves glacier.
Colchis, citrus, violet plantations, all of which need.
Vary sin-grace, not by force, swords and bombs,
Peace Day predawn hours - invisible love.
Thus the delight of all the nations.
Recollected achievements, praying for me, remembering me.
The wise man is the victim of our chronicler,
His wisdom in assessing the eight century wisdom invincible force.
You belong to Georgia, others will calculate century,
Let million be your destiny.

It is sad that such a great person to immortalize the name of the contest is held to introduce competition and not to immortalize his name. While the issue for the national economy sectors to use it and not attempt to discuss the possible consequences of the implementation of recommendations to the Government, Parliament, four committee, relevant ministries, etc.

Note: The paper was not included in the governance issues, which added to the Express papers №56 processing period. Copyright request is not allowed without the consent of the author's use of the use of these issues. Extracts of these diseases is receiving and processing methods, use, testing samples for production, testing the public author. By appealing to world community for the above-mentioned issues, let us know your attitude. A number of issues are not subject to publication.

The final part:

Processed issues relating to environmentally friendly products. The enjoyment of food, minimal, material and labor costs. Production levels, raising the effective use of medicines, as well as the regional problem of management of the maintenance of peace and common

economic spectrum are reflected, which gives full access to these innovations introduced in the regions problems.

Note: The author is not permitted without the consent of the copyright for the use of the use of these issues. Extracts of these diseases is receiving and processing methods, use, testing samples of production, test the selected.

Thermal processing without food and medicinal extracts technology used in human complex diseases and veterinary treatment of cattle. Food extracts are used for human consumption and livestock feeding cattle feeding environmentally friendly health products, which are conditional on each other, and people within the structures of the extract furthermore when 60-65% are the same, which is to be considered as a significant event in medicine and biology.

2. The introduction of new technologies, food production, processing, possession and making of cheese and other sour ream and determine the quantitative and qualitative indicators.

3. industry and the economy is very important for the improvement of material and labor costs in order to reduce the level of specialization and concentration of correct alignment for employment of workers and infrastructure, social living conditions improve.

4. The new product is taking the minimum use of energy resources, which takes effect on the ecology and globalization issues are very important for the state and the improvement of production management - the concept of a normal, peaceful coexistence between countries to preserve humanity. Humanity is faced with new problems and developing its transportation issues are very important theoretical and practical point of view, that there is no alternative. Considering the above mentioned problems are treated - changing its form reflects the essence of humanity is facing a very important problem-solving ability. Academician works l. Chachibaia Alfred Nobel Prize should be granted, but we ask the administration of the Fund.

Established: the work of the book "innovations" and the improvement of production efficiency "author Larry academician Chachibaia given Alfred Nobel Prize.

Equipment, technology, economics, law, the Council of Experts Chairman. Academician N. Mumladze

FAREWELL

Everyone misses the day when striving in the morning!
But are all the aims one, one is only for peace.
Who may be or what is may named loving for nuclear war,
Dressing mother in black, and change her hope into bitterness.
Have you thought for your actions? When you kill the life for evil,
Where have we to find the difference, in the beast of man?
This life seems to be the fruit of sour plum,
Its sun and moon whether are given to someone?
Remember what wise men have said: Who is the King
Who is our patron?" What evil is around us, has anyone counted ever?
What is the name for the author, beast has reflexes no other!
Changeable is this formation, only peace remains unchanged.
Love, brotherhood, union, belief and kind –
All that is left with us as the basic of our lives
Let peace be the informer of everything happy.
Two sides of one big table being happy for sunrise,
Let the word war take out to replace with the peace.
Who thinks about war do not name him a man,
He has to be blamed as evil.
What century has come when the world has no ruler?
When a man is killed for nothing and is this fair?
If we say through truth the policy is ahead;
Who has to blame for, all we are blamed.
No reason for war will end up some day
All will be right, Who starts war is not punished
Hot point will be everywhere, I stand on the island and look for future
And our past is like papers of book Who sacrificed oneself for today
I will stop near his name. Who has made such many mistakes?
Why are tears shedding? Time has come to overcome this temptation
And be under the united flag. Let light the mankind through their way
Those starting the war to overcome with peace;
In the morning baby will be born with bless.
What he receives has to give Only with peace and not with war;
When stupid was given two jaws, he was beat to death.
He cried: what are you doing to me Why are you treating so unjust,
If now you do not take care you will be destroyed for beating the jaw;

You were born in this country to accompany other with your tears,
And what should it be that cannot be without war?
Sky, earth, belief, peace, way, future is all one
We have to protect everywhere and always
Because this is our duty; In this poem there is what values most,
No need for keeping, taking care
It can buy you but it cannot be bought,
Is the dearest of all. This country includes so many things, evil and kind?
If we weight all this, the end is still kind.
We have to say we are right, Which Bible cannot say to us
With so many sins around; This belief comes from Bible and this belief made God
be crucified. We have to stand and walk on right road not to become sinful again.
Let the peace be always the candle lighting
Leading the mankind and defender as sword;
Three days are for keeping your doings and saying
Georgia keeps is her heart, saying no single word for us.
I have one wish let you nurture it
That future be better than present
Let you be happy so that your roots
Be the cradle throughout the century!

Sincerely,

Academician L. Chachibaia
